JOB AID

Review 360 Inspector

A helper that opens beside a Storyline course in Chrome. It shows you the alt text on every image and button, the closed captions, and the notes for the slide on screen, and lets you copy them, jump to any slide, and check knowledge checks.

You only need the course open in Chrome, from a Review 360 link or a published course. The publisher keeps the project file; this tool only reads the course already on your screen, and **it never changes the published course**.

The course on the left, the inspector open in Chrome's side panel on the right.

FIVE TABS

Slides
Jump to any slide, or let the course play itself.

Knowledge check
See the answer and reset a question.

Alt text
Check images and buttons.

Captions
Read and copy closed captions.

Notes
Read and copy slide notes.

What you need

- Google Chrome
- The zip file **Review 360 Inspector.zip**
- The Review 360 link, or the published course, you are reviewing

Install it once (Part 1). After that, start at Part 2 each time you review a course.

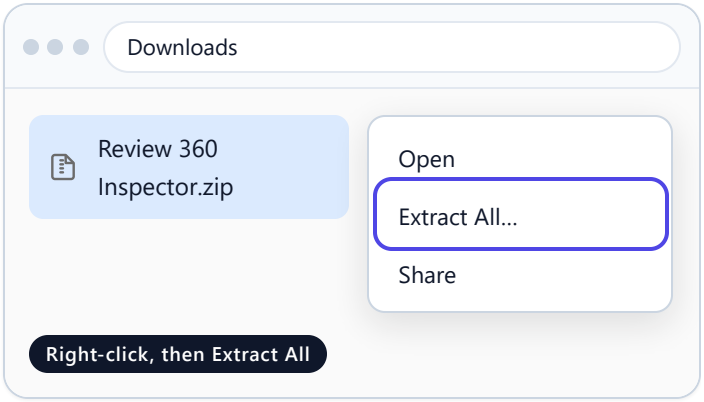

PART 1 · ONCE PER COMPUTER

Put the tool in Chrome

1 Unzip the file

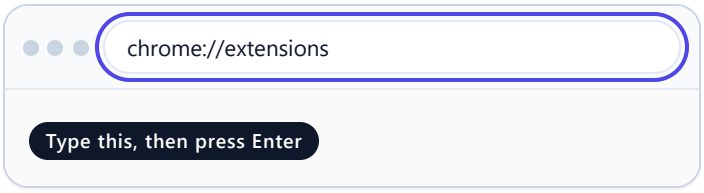

Find **Review 360 Inspector.zip** in your Downloads. Right-click it, choose **Extract All**, then click **Extract**.

You get a folder named **Review 360 Inspector** with the tool's files and this guide inside. Move it somewhere it can stay, such as **Documents**. Chrome runs the tool from this folder, so don't delete it.

2 Open Chrome's extensions page

In Chrome, click the address bar, type `chrome://extensions` and press `Enter`.

3 Turn on Developer mode

At the top right of the Extensions page, click the **Developer mode** switch so it turns on.

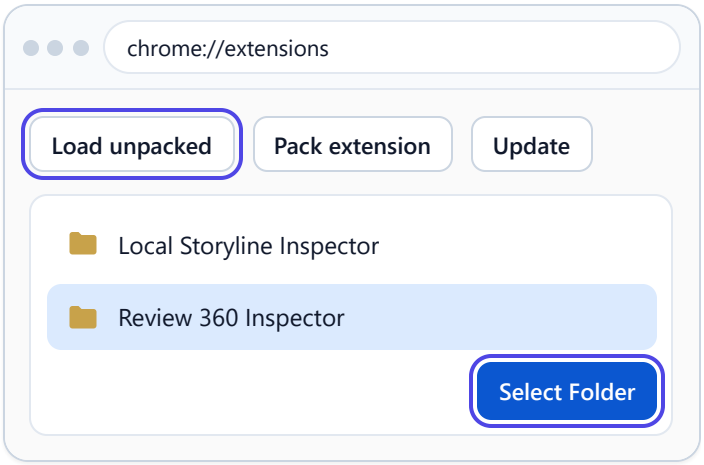

Chrome may warn you about developer-mode extensions. That is normal for an in-house tool like this. Leave Developer mode on.

4 Load the folder

Click **Load unpacked**. In the window that opens, click the **Review 360 Inspector** folder once, then click **Select Folder**.

Pick the folder itself. Don't open it and pick a file inside. The right folder has a file named **manifest.json** directly inside it.

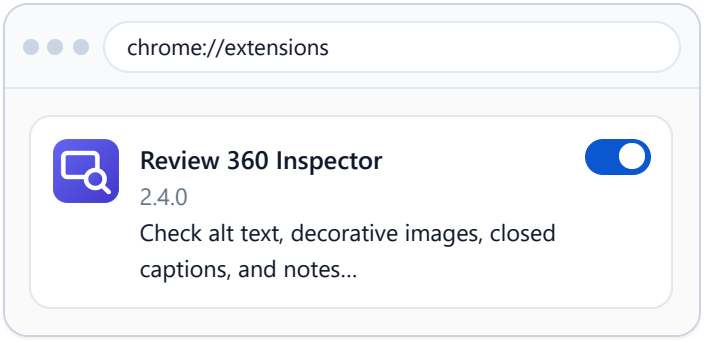

PART 1, CONTINUED

Check it, then pin it

5 Check that it's there

A card named **Review 360 Inspector** appears, with its icon and its switch on.

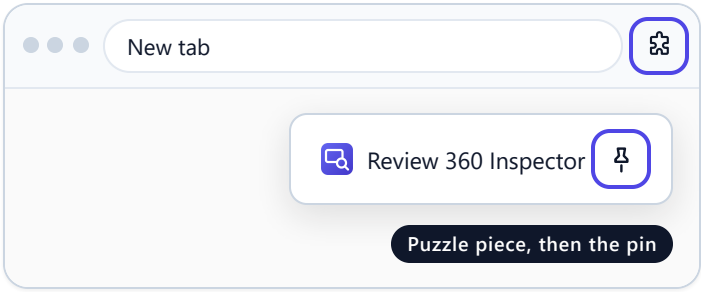

Already have the older Local Storyline Inspector? You can keep both. This one is the one with the indigo icon.

6 Pin the icon to your toolbar

Click the puzzle piece at the top right of Chrome. Find **Review 360 Inspector** and click its pin.

The icon now stays in your toolbar, ready whenever you need it.

That's the whole install

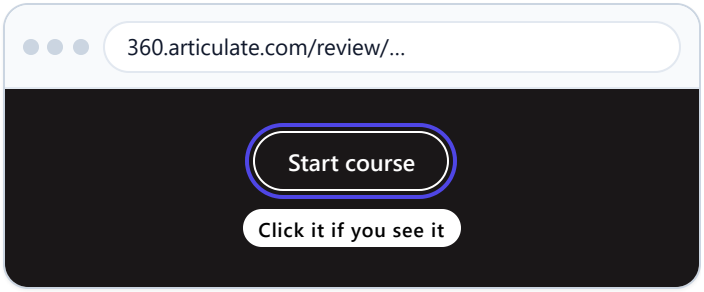

You only do Part 1 once. From now on, start at Part 2.

PART 2 · EACH TIME YOU REVIEW

Open a course

7 Open the course

Open your Review 360 link (or the published course) in Chrome. If you see a **Start** or play button, click it, and wait until a real slide is on screen.

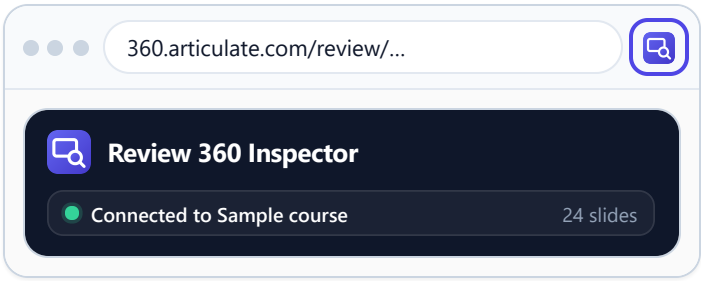

8 Click the toolbar icon

Click the indigo icon in the toolbar. The inspector opens in a panel on the right side of Chrome.

It's ready when the dark header says **Connected to** your course and how many slides it has.

If it says it is looking for a course, wait until a slide is showing and click **Refresh** (the circular arrow).

Prefer DevTools?

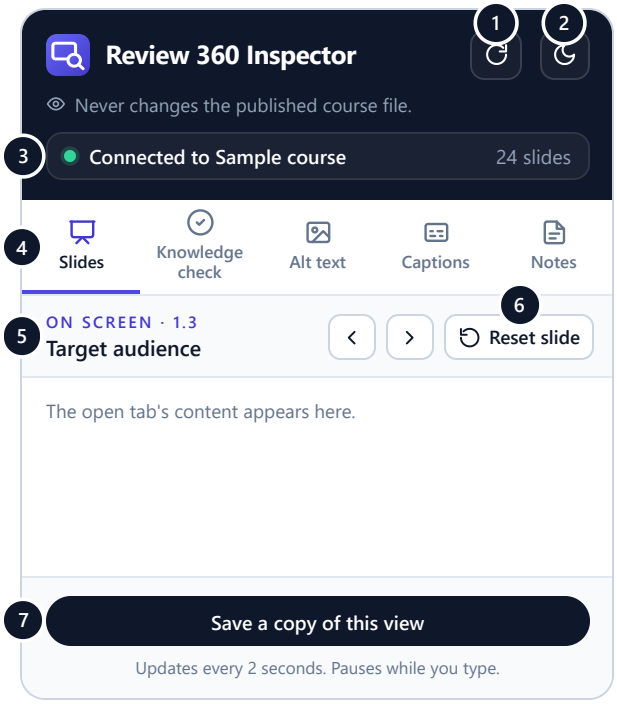

Press `F12` on the course page and open the **Review 360 Inspector** tab. If you don't see it, click » to find it, or close and reopen DevTools once after installing. Use this when the side panel covers too much of the course.

Course saved on your computer?

For a course opened from a folder (the address starts with `file://`), go to `chrome://extensions`, click **Details** on the inspector's card, and turn on **Allow access to file URLs**. Then reload the course.

PART 3 · FIND YOUR WAY AROUND

The parts of the panel

1. **Refresh.** Looks for the course again. Use it after the course loads or if the panel seems stuck.
2. **Light or dark.** Switches the panel between a light and a dark background.
3. **Status.** A green dot and **Connected to …** means it found the course. It also counts the slides.
4. **Tabs.** Click one to switch. The open tab is underlined in indigo.
5. **On screen.** Always shows the slide the course is on, with its scene and slide number.
6. **Previous, Next, Reset slide.** Move one slide back or forward. **Reset slide** puts only this slide back the way it opened.
7. **Save a copy of this view.** Downloads a text file with the slide list, knowledge checks, and this slide's alt text, notes, and captions.

It keeps itself up to date

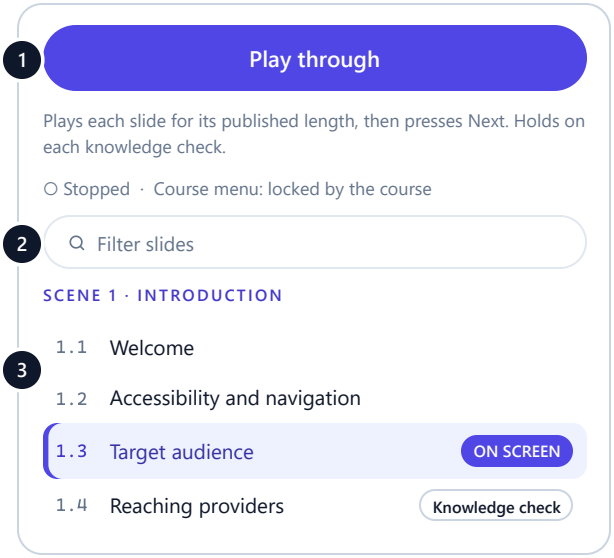

The panel follows the course: when the slide changes, every tab updates within two seconds. You never need to copy anything into it.

Reset slide is the only button that changes anything

And only the slide on screen, only until you reload the page. Reloading the browser tab puts the whole course back. The published course file is never edited.

PART 4 · THE TABS

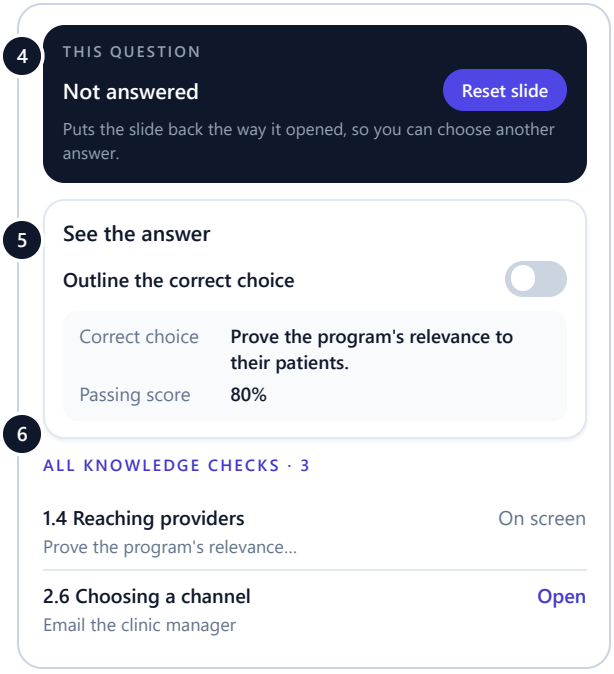

Slides and knowledge checks

Slides

1. **Play through** plays the course by itself, which is handy while you record. It stops on each knowledge check so you can answer, then carries on. Click **Stop play through** to take over.
2. **Filter slides.** Type part of a slide title to find it fast.
3. **Click any slide** to jump straight to it. The highlighted row is the slide on screen; **Knowledge check** marks question slides.

If a slide won't open, the course menu is locked by the publisher. Use Play through, or press Next in the course.

Knowledge check

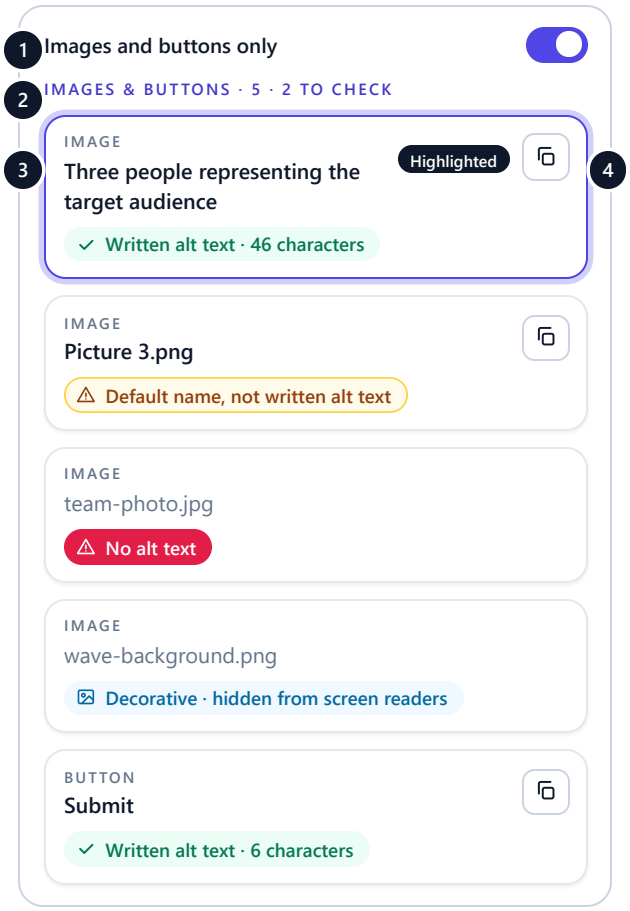

4. **This question** says whether the question on screen is answered, and whether it was right. **Reset slide** clears the answer and feedback so you can try every choice. Other slides and the course score stay as they are.
5. **See the answer** lists the correct choice and passing score. Turn on **Outline the correct choice** to box it on the slide, without answering.
6. **All knowledge checks** lists every question in the course. Click **Open** to jump to one.

On a slide with no question, this tab offers **Go to the next question**. **Slide details** at the bottom lists states, layers, and triggers, with a button to copy them for support.

PART 4 · THE TABS

Alt text

Alt text is the description a screen reader speaks for an image or a button. This tab lists the images and buttons on the slide, top to bottom, with exactly what a screen reader gets, and flags anything to fix.

1. **Images and buttons only** is on by default. Turn it off to also see text, shapes, and answer choices.
2. **The count** tells you how many items need attention on this slide.
3. **Click a card** to draw a box around that object on the slide. The card gets an indigo outline. Click it again to clear.
4. **Copy** puts the alt text on your clipboard, ready to paste into a review note.

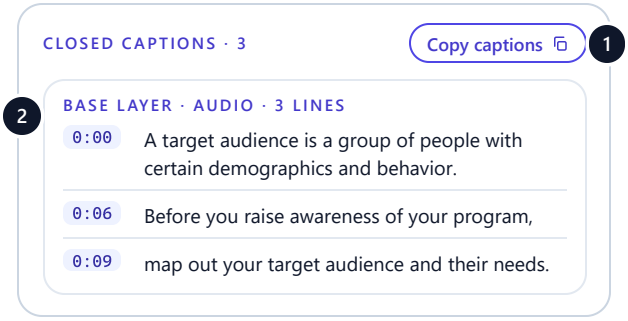

An image with no alt text shows its file name, in grey, so you can find it in the project. Player controls and anything hidden or invisible are left out.

BADGE	WHAT IT MEANS	WHAT TO DO
✓ Written alt text	Someone wrote a description.	Read it. Does it describe the image well?
⚠ Default name, not written alt text	Storyline's placeholder was left in, such as a file name or "Rectangle 7".	Ask for real alt text, or mark it decorative.
⚠ No alt text	A screen reader gets nothing for this image.	Ask for alt text, or mark it decorative.
Decorative · hidden from screen readers	Set as decorative: "Object is visible to accessibility tools" is off.	Fine for decoration. Check it isn't an image that carries meaning.
⚠ Hidden from screen readers on a button	A button or answer choice that screen readers can't reach.	Flag it: learners need to use it.

PART 4 · THE TABS

Captions and notes

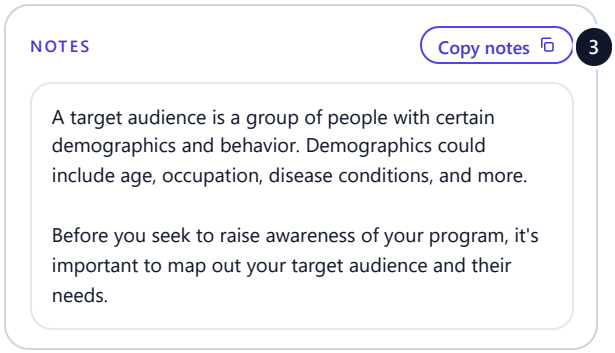

Storyline won't let you copy captions or notes. These two tabs show them as plain text for the slide on screen, with copy buttons, and you never have to play the slide.

Captions

1. **Copy captions** copies the text, one caption per line, without the times.
2. **Each line shows when it starts.** Captions on another layer (feedback, for example) are listed under that layer's name.

Caption files imported as SRT, VTT, or SBV all show here. "This slide has no closed captions" means just that.

Notes

3. **Copy notes** copies the slide's notes as plain text, one line per paragraph.

These are the same notes the course shows in its Notes tab (some courses call it Transcript).

Quick review routine

Open a slide, then glance through **Alt text**, **Captions**, and **Notes**. Copy what you need into your review notes, press **Next** in the slide bar, and repeat.

IF SOMETHING LOOKS WRONG

Quick fixes

WHAT YOU SEE	WHAT TO DO
"Looking for a Storyline course"	Make sure a slide is showing (click **Start** if there's a start screen), then click **Refresh**.
Only the Review 360 title screen	Start the course and wait for the first slide. Then click **Refresh**.
Chrome says "Manifest file is missing"	You picked a folder one level too high. Choose the **Review 360 Inspector** folder that has **manifest.json** directly inside it.
The toolbar icon is missing	Click the puzzle piece and pin **Review 360 Inspector** again.
No **Review 360 Inspector** tab in DevTools	Close DevTools and press `F12` again. Look under ».
Chrome turned the tool off	Go to `chrome://extensions`, turn **Developer mode** on, and switch the inspector's card back on.
"Allow access to file URLs" message	On the inspector's card, click **Details** and turn that option on. Reload the course.
Alt text tab looks empty	Turn off **Images and buttons only** to see everything else on the slide.
Play through isn't moving	Press Next once. If it's a knowledge check, answer it; playback continues after you leave the question.
Start one slide over	Click **Reset slide** in the slide bar.
Start the whole course over	Reload the browser tab.
A new version arrives	Replace the files in your **Review 360 Inspector** folder, then click the circular reload arrow on its card at `chrome://extensions`.

This tool will not

- Change, save, or upload the published course
- Give you the publisher's project file, or open the course in Storyline
- Send anything to another website. Everything stays in your browser.
